
schema

Release 0.1.0

Nov 06, 2017

Contents

“Metadata, for humans.”

Release: v0.1.0 (Installation) **schema** keeps it simple by fetching you human-readable (and minimal) schemas from data models (provided by schema.org) updated **nightly**. This ensures that you optionally receive up-to-date schemas (*on the fly*) without having **schema** reinstalled, and speak in the same language with other users too.

```
>>> import schema
>>> thing = schema.Schema('Thing', dict(url = 'http://bit.ly/2fbwx4m'))
```

schema officially supports Python 2.7+ and 3.3+.

schema is created and currently maintained by [Achilles Rasquinha](#).
